

Homework

list down at least 5 examples of websites or apps for each framework architecture.

1. MVC (Model View Controller)

- Examples:
 - Gcash:** Mobile wallet app in the Philippines, using MVC for backend management.
 - Facebook:** Social media platform with apps using React, an MVC framework.
 - Shopify:** E-commerce platform built with Rails, which follows MVC.
 - Grab:** Ride-hailing and delivery app using MVC for its various features.
 - Lazada:** Online shopping site using Laravel, an MVC framework.

2. Push-Based

- Examples:
 - Viber:** Messaging app with push notifications for new messages.
 - Messenger:** Delivers real-time message notifications.
 - Twitter:** Sends notifications for tweets, likes, and messages.
 - WhatsApp:** Notifies users about new messages and calls.
 - Discord:** Alerts users about messages and calls through push notifications.

3. Pull-Based

- Examples:
 - Spotify:** Users request and stream music on demand.
 - YouTube:** Users search for and watch videos when they choose.
 - Netflix:** Streams movies and shows based on user requests.
 - Google Drive:** Users access files from the cloud when needed.
 - Apple Music:** Users request and play songs on demand.

4. Three Tier

- Examples:
 - GlobeOne App:** Manages telecom services with a three-tier structure.
 - Cebu Pacific Air:** Online booking system with separate tiers for bookings, payments, and data.
 - UnionBank Online:** Online banking platform with three-tier architecture.
 - BPI Online:** Uses three tiers for managing online banking services.
 - SM Online Shop:** E-commerce platform with a three-tier system for shopping and inventory.
